

TO WHOM IT MAY CONCERN

'Gwyn Roberts Construction a'i Fab' have been contracted to complete five major ditch blocking contracts on the Berwyn Site of Special Scientific Interest (SSSI) to date. These contracts involved the damming and re-profiling of over 40km of artificial drainage ditch, across five sites, on sensitive peat-land habitats.

Many of these sites are remote, requiring the operation of heavy machinery on challenging, boggy, moorland terrain, up to an altitude of 600m, often in difficult winter weather conditions.

Gwyn has proved himself to be a competent, adaptable and approachable contractor, capable of carrying out the specified works to a high standard. The company work in a safe, fast and efficient manner, demonstrating a high degree of competency in machinery operation. They have shown a clear aptitude for adopting new working techniques, as well as demonstrating innovative approaches to achieving the project aims. Gwyn's agricultural background and understanding has assisted in liaison with landowners, helping to address some sensitivities and requirements concerning livestock management on the work sites.

Tender process paperwork has been produced and presented professionally, to the required standard.

I would have no hesitation in recommending Gwyn Roberts Construction for similar ditch-blocking works or excavator related projects on nature conservation projects elsewhere.
